Without laying it on too thick, our **THICK FACE™ VENEER** is rotary cut to a generous 1/38". (Most other domestic and import peels are a paper-thin 1/50".) This little difference gives you several huge advantages:

- Easier to sand.
- Much less likely to get sanded through.
- Virtually eliminates core transfer on veneer core panels.
- Easier to finish.
- Superior appearance in any end use application.
- Excellent machinability.
- Preferred by professional cabinetmakers and woodworkers.

It all comes down to this: For a better quality, more stable panel, remember to stick with Thick.

Available in maple, oak, birch and most other domestic rotary veneers.

**THICK FACE™ VENEER**

THE BACK STORY ON HARDWOOD PLYWOOD.

No matter how you slice it, Timber Products is America’s leading hardwood plywood resource.

- We own our own forestlands, mills and TP Trucking. This vertical integration means we control the quality and manufacturing efficiencies.

- We offer the full line of hardwood species, in all cores, panel sizes and thicknesses.

- Our forestlands are certified to be in full compliance with the Sustainable Forestry Initiative® and we were the world’s first hardwood plywood manufacturer authorized to carry the SFI® Program label.

- Our Green T™ hardwood plywood panels meet many of the requirements of the US Green Building Council’s LEED® program.

- With mills in Oregon and Mississippi, we deliver a competitive product, nationwide, with tremendous cost effectiveness.

These are just a few of the reasons our customers depend on us for a steady supply of quality products with the beauty of real wood.
