

HIGH PERFORMANCE SURFACES: HEALTHCARE DESIGN

Upper Canada and Aristech are as committed as ever to the health and safety of our customers, employees and the world. Aristech, with four of the world's multi-ton continuous casting machines in Florence, Kentucky, has an immense capacity to serve the global acrylic surfacing market and continue to fulfill orders on schedule.

SOLID SURFACE FOR ASEPTIC ENVIRONMENTS

There is no material that allows for greater cleanliness. Avonite Surfaces® 100% acrylic solid surface sheets do not absorb bacteria, can be easily cleaned, are seamlessly assembled and the material malleability makes it possible to design curved, rather than angular, corners, for more efficient cleaning. Avonite Surfaces® is ideal for everything from ultra-clean surgical suites to sanitary food preparation stations.

BACTERIOSTATIC WALL CLADDING FOR PATIENT/SURGICAL ROOMS

Avonite Surfaces® Wet Wall™ sheets have been formulated to naturally inhibit the growth of bacteria and dangerous pathogens. This 6mm 100% acrylic wall cladding line resists a long list of chemical and cleaning products, including perchloric acid. Exceptionally strong, weatherable, nonporous and stain resistant our material performs exceptionally, in the most critical of environments.
